# Quick guide to installing Docker web ui

Make sure the router's Internet connection is OK, then enter **/etc/docker-web** command in the ssh terminal, it will automatically download and install and start the docker web management interface:

```
root@FriendlyWrt:/# /etc/docker-web
Unable to find image 'portainer/portainer:latest' locally
latest: Pulling from portainer/portainer
d1e017099d17: Pull complete
aa7ba206ca51: Downloading [>                                              ]  216.9kB/21.45MB
```

After the above command runs successfully, enter your router's **IP:9999** port in the web browser, then set the administrator password, select local to enter the management interface:

Click on the local icon to manage local Docker images and containers:
